

Professional Development Course on VLSI System on a Chip Design (Full-time)

Sandeepani offers the **16-week full time (Monday – Friday)** Professional Development Course for recent graduates and post-graduates in Electronics/Electrical/Telecommunication engineering. This program is specifically designed with an objective to provide a sound platform for the students and prepare them for a successful career in the fields of VLSI Design and verification with FPGAs.

The PDC offers the right blend of classroom teaching, quality hands-on training from 'concept-to-project', covering design methodology using industry standard tools and practices. The course includes a project work as well.

Placement assistance is provided to those who complete all modules of this course and a pre-placement test.

Course Duration: 16 Weeks		Course Structure and Outline
Mod.	Module Title	What You Learn
P1 (5 Days)	Engineering Primer	<ul style="list-style-type: none"> • Number systems • Logic gates • Boolean expressions • Introduction to registers and counters • Introduction to Embedded systems
C1 (10 Days)	Advanced Digital System Design	<ul style="list-style-type: none"> • Synchronous Finite State Machine Design • Data-path elements – Arithmetic Structures • Introduction to Programmable Platforms • Design Capture and Simulation • Practical Digital System Design Examples
C2 (15 Days)	Verilog	<ul style="list-style-type: none"> • Hardware Modeling Overview, • Verilog language concepts • Modules and Ports • Dataflow Modeling • Introduction to Test benches • Operators • Procedural Statements • Controlled Operation Statements • Coding for Finite State Machines • Coding For Synthesis • Tasks and Functions • Advanced Verilog Test benches
C3 (15 Days)	FPGA Design	<ul style="list-style-type: none"> • FPGA Architecture - Basic Components of FPGA (LUT, CLB, Switch Matrix, IOB), FPGA Architecture of different families: 7-series and UltraScale devices, Zynq • FPGA Design Flow – Xilinx Vivado tool Flow, Reading Reports, Implementing IP cores, Debugging Using Vivado Analyzer • Optimal FPGA Design – HDL Coding Techniques for FPGA, FPGA Design Techniques, Synthesis Techniques, Implementation Options • Static Timing Analysis – Global Timing Constraints, Path specific timing constraints, Achieving Timing Closure,

		Introduction to Reset techniques, Clock Domain Crossing, Multiple Clock Domains
Integrated in the course	Course Project	Design/Implementation

Note:

- 1) The contents listed above is a representative outline and is subject to change at short notice in compliance with the current industry demands
- 2) Legend: P# - Primer Module, C# - Core Module
